

ABSTRACT

The present invention relates to a connection data change method and device, and a
5 switching unit for changing connection data for a node constituting a network, and includes a connection data management part managing connection data for connection with another switching unit and
10 a change operation part changing the connection data so that the connection with the other switching unit is changed to a fixed connection type or a variable connection type, wherein the change operation part changes the connection with the other switching unit to the variable connection type when the connection
15 is made and to the fixed connection type after the connection is completed.
